

electron / W gradient minima: local-unitary fidelity distributions

$(U_e \otimes U_p \otimes U_\gamma)|\psi\rangle$; final order $(e_{out}, p_{out}, \gamma_{out})$

selection: D_W - minimum ≤ 0.05 ; retained 1156/1219; minimum=1.6432839e-05

Canonical W LU infidelity (matching target)

Canonical GHZ LU infidelity
