

muon / W gradient minima: local-unitary fidelity distributions

$(U_e \otimes U_p \otimes U_\gamma)|\psi\rangle$; final order $(e_{out}, p_{out}, \gamma_{out})$

selection: D_W - minimum ≤ 0.05 ; retained 1143/1296; minimum=3.5327861e-06

Canonical W LU infidelity (matching target)

Canonical GHZ LU infidelity
